INTRODUCTION

The Brodersen monitoring relays are high quality products incorporating up-to-date circuit design together with modern, efficient components to ensure a long trouble free life in a wide range of operating conditions. Power consumption and, thus, heat dissipation are minimal and the entire range has been designed and tested to the latest requirements for EMC immunity and emission.

A wide range of commonly used standards of voltage, current, temperature and process signals can be monitored by the Brodersen relays.

The Brodersen Control and Monitoring relays are produced in two design categories; installation and industrial design. The installation design is based on DIN rail or 11 pole plug-in mounting and are designed to fit into installation enclosures. The industrial design is in 22,5mm housing with the terminals placed to optimize installation time in industrial applications.

Control & Monitoring Relays
Phase Failure Relay MCP-10

DESCRIPTION
Control relay for monitoring of correct phase sequence, phase break and undervoltage.
Connection to 3-phase mains supply with or without neutral. Fixed limits for energizing and de-energizing the single or double output relay. LED indication of supply voltage and phase failure.
Versions available for DIN rail or 11-pole plug-in base mounting.
Versions available for separate supply and measuring voltage.

OPERATION
The phase failure relay monitors phase sequence, phase break and undervoltage.
The output relay is energized when all three phase voltages are present and the phase conditions (voltage and phase sequence) are correct.
The phase failure relay has a fixed time delay to prevent faulty energization and de-energization caused by short interferences.
LED indication of supply voltage connected (green) and phase or voltage failure (red).
The phase failure relay uses L2 and L3 (6 and 7) for supply voltage.
The indicators therefore only work if these phases are present.
An improvement of the measuring range is obtained by connecting neutral to the relay (see the technical data).

OPTION
Separate supply and measuring voltage S.
The supply voltage for the internal circuit is separated from the measuring voltage which allows the measuring circuit and the LED indicators to work if one or more of the monitored phases are interrupted.

</tbody>
</table>

PHASE MONITORING
1. Lightly loaded 3-phase motor and L1 interrupted ($\phi > 20^\circ$).
2. Ohmic load or heavily loaded 3-phase motor and L2 interrupted ($\phi = 180^\circ$).
3. Reversed order of the phases L2 and L3 i.e. incorrect phase sequence ($\phi = 120^\circ$).

VOLTAGE MONITORING
1. Voltage drop on one phase.
2. Voltage drop on all 3 phases (symmetrical).

If one of the phases connected to an idle 3-phase motor is interrupted, no changes can be measured in the voltage and phase conditions, and the phase failure relay will not detect the failure.
TECHNICAL DATA

Phase measuring:
With neutral: Fault: \( \varphi > 25^\circ \), typically by \( \varphi > 20^\circ \).
Without neutral: Fault: \( \varphi > 50^\circ \), typically by \( \varphi > 40^\circ \).

Voltage measuring:
With neutral:
- Change on 1 phase: Energized output relay: > 90% of \( V_{nom} \), typically by > 80%.
  Fault: < 65% of \( V_{nom} \), typically by < 70%.
- Change of 3 phases, symm.: Energized output relay: > 90% of \( V_{nom} \).
  Fault: < 80% of \( V_{nom} \), typically by < 85%.

Without neutral:
- Change on 1 phase: Energized output relay: > 90% of \( V_{nom} \), typically by > 80%.
  Fault: < 50% of \( V_{nom} \), typically by < 60%.
- Change on 3 phases, symm.: Energized output relay: > 90% of \( V_{nom} \), typically by > 85%
  Fault: < 75% of \( V_{nom} \), typically by < 80%.

Temperature drift: All specifications apply for the specified temperature range.

Output relay: SPDT or DPDT.
Load (\( \cos \varphi = 1 \)): D1/S1: 8A/240V AC
10mA/24V DC
S2: 5A/240V AC
10mA/24V DC

Frequency: Max. 1000 operations per hour at max. load.
Mechanical lifetime: Min. 10 x 10^6 operations.
Electrical lifetime: Min. 100,000 operations at full load.
Time delay: 0.3-0.9 sec.

Mounting: S1/S2: 11-pole plug in.
D1: Directly on 35 mm DIN rail (EN50022).

Terminals: Max. conductor size 4mm².
Screw type terminals with self-lifting clamps shrouded in accordance with VDE0106 (finger and back of hand protection).

Supply/measuring voltage:
3 x 220V AC + 10%,
3 x 380V AC + 10%,
3 x 400V AC + 10%,
3 x 415V AC + 10%.
220V AC ±10% (option S).
240V AC ±10% (option S).
Other AC voltages on request.

Mains frequency: 45-66Hz.

Consumption: 1-3VA.

EMC: Conforming to EN 50081-1/EN 50082-2.

Isolation: 2kV AC according to EN 60950 class I.

Ambient temperature: -25 to 55°C.

Protection: S1/S2: IP40.
D1: IP20.

Housing: Noryl SE-1.

Weight: Typically 170 g.

NOTES/REMARKS
1) Double output relay only available in S2 version.
2) Terminal 2 (A1) is only used when a separate supply voltage is connected.
3) Available with user-specified voltage. Please specify voltage.

APPLICATION
Monitoring of the supply voltage to a 3-phase motor with signal lamp indication of phase failure and motor contactor on.

Input impedance:
- AC.: 1kOhm/V.
- DC: 1MOhm (>10V).

Measuring accuracy: 1% of full scale ± 1 digit.

Hysteresis: 1% of full range.

Temperature drift:
- Voltage, current and temperature: Max. 0.01% per °C.

Display:
- 3½-digit LCD-type (-1999 to 1999).
- Digit height: 6.5 mm.
- Display update time: Typically 0.4 sec.

Scale:
The scale is adjusted to the actual measuring range listed in the ordering key.

Output relay:
- SPDT (single changeover contact).
- Load (cos ϕ=1):
  - D1/S1: Max. 8A/240V AC
  - Min. 10mA/24VDC
- Frequency: Max. 1000 operations per hour at max. load.
- Mechanical life time: Min. 10 x 10⁶ operations.
- Electrical life time: Min. 100,000 operations at max. load.
- Time delay: Typically 1s.

Mounting:
- S1: 11-pole plug-in.
- D1: Directly on 35 mm DIN-rail (EN50022).

Terminals:
Max. conductor size 4 mm².
Screw type terminals with self-lifting clamps shrouded in accordance with VDE0106 (finger and back of hand protection).

Supply voltage:
- 12-48VDC(10.5-60V)/12-30VAC(10.5-35V).
- 12V AC/DC (10-18V) ¹.
- 24V AC/DC (18-35V) ¹.
- 24V AC (22-26V).
- 110/120V AC (95-135V).
- 380/415V AC (342-418V).

Mains frequency: 45-66Hz.

Consumption: 1-3VA.

Protection:
- S1: IP40.
- D1: IP20.

EMC:
Conforming to EN 50081-2/EN 50082-1.

Ambient temperature: -25-55°C.

Isolation:
- AC versions: 4kV AC according to EN 60950 class II.
- G24 version: 1kV AC

Dimensions:
Identical to MCP-10, see page 38.

Housing:
Black Noryl SE-1.

Weight:
Typically 170 g.

NOTES/REMARKS

1) There is no galvanic isolation between input and supply. External isolation should be provided to prevent damage to the controller when measuring voltage/current or a G- or other version with internal isolation should be used.

NOTES/REMARKS

1) There is no galvanic isolation between input and supply. External isolation should be provided to prevent damage to the controller when measuring voltage/current or a G- or other version with internal isolation should be used.

2) The specified accuracy is valid within the subranges:

J1: 0 -1100 °C  S1: 150 -1550 °C.
K1: 0 -1150 °C  R1: 150 -1550 °C.
DESCRIPTION

Digital control relay with 3½-digit LCD display.
The scaling facilities of the MCU-10...U make it ideal as a monitor or control device for normal standard process signals, e.g. 4-20mA. Any output from a transmitter can be scaled to engineering units and a unit label can be inserted on the front of the control relay. A sheet with common units is enclosed with the relay.

Typical applications:
General process instrumentation.
Signal monitor with read-out in engineering units.
3½ digit LCD display with selectable read-out of actual input and setpoint.
Output relay with LED indication of energized output relay.
Built-in power supply for direct mains supply. Galvanic isolation between input and supply.
Standardized housing for 11-pole plug-in or DIN rail mounting.

VERSION/ORDERING CODES

| Type: Digital control relay. MCU-10 |
| Mounting: 11-pole plug-in. S  |
| DIN rail. D |
| Output relay: SPDT 1 |
| Supply voltage: 12-48V DC/10-30V AC G24 |
| 12V AC/DC 912 |
| 24V AC/DC 924 |
| 24V AC 024 |
| 110/120V AC 115 |
| 220/240V AC 230 |
| 380/415V AC 400 |
| Input: Standard process signals: 0-20mA DC/4-20mA DC U1 |
| and 0-10V DC/2-10V DC U1 |

OPERATION

The display shows the actual input signal when the supply voltage is connected.
The setpoint is displayed by pressing the S button and the setpoint is adjusted on the front mounted potentiometer.
The output mode switch for selecting whether the output relay should be energized above or below the adjusted setpoint, see the diagrams below.
The red LED indicator will light up when the output relay is energized.

FRONT

TECHNICAL DATA

Measuring ranges:

DC
0-20mA/4-20mA and 0-10V/2-10V.
The actual input signal is selected via a switch on the control relay.

Measuring accuracy: 1% of full scale ± 1 digit.

Hysteresis: 1% of full range.

Input impedance:
Voltage: 1Mohm.
Current: 50Ohm.

Temperature drift: Max. 0.02% per °C.

Display:
Digit height: 6.5 mm.
Display update time: Typically 0.4 sec.

Scale: The scale is adjusted to the actual measuring range which is user adjustable (-1999 to 1999, max. 2000 steps).

Decimal point: Selectable.

Output relay: SPDT (single changeover contact).
Load (cosϕ=1):
D1/S1: Max. 8A/240V AC
Min. 10mA/24VDC
Frequency: Max. 1000 operations per hour at max. load.
Mechanical life time: Min. 10 x 10⁶ operations.
Time delay: Typically 1s.

Mounting: S1: 11-pole plug-in.
D1: Directly on 35 mm DIN-rail (EN50022).

Terminals: Max. conductor size 4 mm².
Screw type terminals with self-lifting clamps shrouded in accordance with VDE0106 (finger and back of hand protection).

Supply voltage: 12-48VDC(10.5-60V)/12-30VAC(10.5-35V).
12V AC/DC (10-18V) 1). 24V AC/DC (18-35V) 1).
24V AC (22-26V).
110/120V AC (95-135V).
380/415V AC (342-418V).

Mains frequency: 45-66Hz.

Consumption: 1.3VA.

Protection:
S1: IP40.
D1: IP20.

EMC: Conforming to EN 50081-1/EN 50082-2.

Ambient temperature: -25-55°C.

Isolation:
AC versions: 4kV AC according to EN 60950 class II.
G24 version: 1kV AC

Dimensions: Identical to MCP-10, see page 39.

Housing: Black Noryl SE-1.

Weight: Typically 170 g.

CONFIGURATION/CALIBRATION

The control relay for standard process signals is fully user adjustable within in the scale limits -1999 to 1999 with a maximum span of 2000 steps, e.g. a scale from -1000 to 1000.

The offset is adjustable within the range -1999 to 1999 , however, the maximum offset must be smaller than the required span:

Max. offsetsSpan = Max. scale - Min. scale
a scale e.g. 500 to 800 (500 ≤ 800 - 500) can therefore not be obtained.

Select decimal point position:

Selectable input range: 0-20mA/0-10V or 4-20mA/2-10V.

Example: Adjust the control relay to a scale -1000 to 1000, input signal 4-20mA.

1) Set the switches for input, output mode and decimal point position. Mount the front label and connect the supply voltage.
2) Apply min. signal 4mA and adjust Offset to display read-out 0000.
3) Apply max. signal 20mA and adjust Scale to a display read-out 1999. Adjust Offset to display read-out 1000.
4) Apply min. signal 4mA and check display read-out is -1000. If incorrect, return to step 2 and readjust the control relay.

The control relay is now calibrated and ready to use.

NOTES/REMARKS

1) There is no galvanic isolation between input and supply. External isolation should be provided to prevent damage to the controller when measuring voltage/current or a G- or other version with internal isolation should be used.
